

MTD 2016 Chairs' Welcome

It is our great pleasure to welcome you to the *2016 MTD (Moving Target Defense) Workshop*. This workshop seeks to bring together researchers from academia, government, and industry to report on the latest results on moving-target defense research, and to have productive discussion and constructive debate on this topic. The workshop is a single day event co-located with the *2016 ACM Conference on Computer and Communications Security (ACM CCS)*. Out of a total of 26 submissions from Asia, Europe, and North America, we accepted 9 regular papers and 2 short papers. In addition, we have accepted one system demo.

We also encourage attendees to attend the keynote and invited talk presentations. These valuable and insightful talks will give us a better understanding of the future:

- *A Cyber Mutation: Metrics, Techniques and Future Directions*, Ehab Al-Shaer (who is currently at UNC Charlotte)
- *Moving Target Defense - A Journey from Idea to Product*, Jason Li (who is currently at Intelligent Automation, Inc.)

Putting together *MTD'16* was a team effort. We thank all authors who submitted papers. We thank the program committee members and additional reviewers for their great effort towards a strong program. We are also very grateful to the invited speakers for their presentations. Finally, we thank the ACM CCS organizers, particularly the workshop chairs Mathias Payer and Stefan Mangard for their support and help.

We hope that you will find this program interesting and thought-provoking and that the workshop will provide you with a valuable opportunity to share ideas with other researchers and practitioners from institutions around the world.

Peng Liu
