

Homogeneity of Fibrin Gels by Determining its Poisson Ratio from its Global Strain Measurement using 2D Digital Image Correlation

Masters Thesis Presented to
The Graduate Faculty of the Department of Physics
College of Arts and Sciences
University of San Carlos, Cebu City, Philippines

In Partial Fulfillment of the Requirements
For the Degree of
Master of Science in Physics

by

Mr. Ro-Ann S. Laude
March 2016

TABLE OF CONTENTS

Table of Contents	ii
List of Figures	iii
1 Introduction	
1.1 Objectives	3
1.2 Significance of the Study	3
1.3 Scope and Limitation	4
2 Theoretical Background	
2.1 Digital Image Correlation	5
2.2 Digital Image Correlation with Fast Fourier Transform	8
2.3 Strain Field Measurement	9
3 Materials and Methods	
3.1 Sample Preparation	11
3.2 Calibration	12
3.3 The Experimental Set-up	13
3.4 Digital Image Correlation	15
3.5 Poisson Ratio Measurements	17
4 Results and Discussions	
4.1 Displacement Measurement by DIC-FFT	19
4.2 Poisson's Ratio	24

5	Conclusions	26
6	Recommendations	27
	Literature Cited	28
Appendix A		
	A.1. Image displacement measurement by DIC-FFT with interpolation	31
	A.2. Simulation for checking the accuracy of DIC program	32
	A.3. An algorithm that measures the Poisson's ratio.	33
	A.4. Shear stress displacement of 3.0 - 8.0 μm of a 4.0 mg/ml fibrin gel	34
Appendix B		
	Detailed Protocol for Fibrin Reconstitution in New Chamber Design	40
	B.1. The effect of displacement induced to the value of the correlation coefficient	42
	B.2. The effect of induced displacement to the number of sub-images that have 0 % error.....	42
	B.3. Effect of shear stress displacement to the value of the Poisson ratio	43
	Curriculum Vitae	44

LIST OF FIGURES
